USE UNDER MEDICAL SUPERVISION

*Vivonex[®] Pediatric Powder is formulated to contain low quantities of fat which, under some circumstances, may be insufficient to meet the essential fatty acid requirements of the patient.

vivonex[®]

PEDIATRIC

Elemental Powder

- A nutritionally complete, hypoallergenic, amino acid-based powder specifically formulated for the nutritional management of children ages 1-13 years with malabsorption and other related medical conditions that result in severely impaired GI function.
- Provides essential nutrients needed to grow.
- Can be used as sole source nutrition.

Vivonex[®] Pediatric Mixing Chart[†]

CALORIC DENSITY	0.67 kcal/mL	0.73 kcal/mL	Standard Dilution [†] 0.8 kcal/mL	0.87 kcal/mL	0.93 kcal/mL	1 kcal/mL
kcal/fl oz	20	22	24	26	28	30
Water Needed (mL)	225	220	220	215	220	210
Unpacked Level Scoops	8	9	10	11	12	13
Final Volume (mL)	~250	~250	~250	~250	~250	~250
mOsm/kg Water	346	377	413	449	480	516
Calories/1000 mL	640	720	790	860	910	1000
Grams Protein/1000 mL	19	21	23	26	27	30
Gravity Flow Through a 5 Fr. Tube	Yes	Yes	Yes	Yes	Yes	Yes

[†]Values are based on calculated measurements. Equation to calculate amount of water to add per serving: $(\text{desired calories}/\text{desired caloric density in decimal form}) - 30$ (the powder's displacement) = **water amount**. For example, to make 1 serving (200 calories/250 mL) of standard dilutions: $(200 \div 0.8) - 30 = 220 \text{ mL water}$. Higher or lower calorie formula concentrations should be used only under the direction of a medical professional.

Decisions regarding caloric concentration should be based on medical condition and history. The health care provider is responsible for determining nutritional requirements and monitoring patient tolerance to feedings.

As with any powdered formula product, use with immune-compromised children is not recommended. When such use is necessary, we recommended following the Academy of Nutrition and Dietetics guidelines for safe preparation, storage, and administration.
